1. Executive Summary

Key Metrics, Critical Issues & Quick Wins

2. Audit Categories

What Works

Findings by Severity

3. Action Plan

Phased Roadmap

4. Data Sources & Methodology

1. Executive Summary

This report presents a comprehensive SEO audit of **rahul.techiking.com** for a **Personal Portfolio / Professional Profile** site, generated on September 03, 2026. Findings combine technical, content, schema, performance, visual, and search-readiness evidence as available.

55/100

SEO HEALTH SCORE

Critical Issues Found:

1. **Info:** Site is NOT indexed in Google — zero results for site: search
2. **Info:** Zero structured data (JSON-LD/Microdata/RDFa) on entire site
3. **Info:** AI crawlers (GPTBot, ClaudeBot, Google-Extended + 5 more) blocked by Cloudflare edge — not in repo
4. **Info:** Missing og:image and twitter:image despite declaring summary_large_image card
5. **Info:** No HTTPS enforcement — HTTP serves 200 OK directly (no redirect)

Quick Wins:

1. Enable 'Always Use HTTPS' in Cloudflare dashboard (2 min)
2. Unblock GPTBot + ClaudeBot + Google-Extended in Cloudflare AI Crawl Control (5 min)
3. Submit sitemap to Google Search Console (10 min)
4. Add favicon to public/ directory (15 min)
5. Fix canonical trailing-slash mismatch in sitemap.xml (2 min)

2. Audit Categories

2.1 Technical SEO

Score: **68/100**

What Works

- Fully server-rendered HTML (is_spa: false, no JS required for content)
- Valid sitemap.xml with current lastmod date
- Proper 404 handling (HTTP 404 + noindex meta)
- Brotli compression active, HTTP/2 enabled
- Clean URL structure, responsive viewport meta
- 137+ Tailwind responsive breakpoint classes

Findings

No HTTPS enforcement **Critical**

<http://rahul.techiking.com/> returns 200 OK instead of redirecting to HTTPS. Site fully accessible over unencrypted HTTP — duplicate content and security risk.

Recommendation: Enable 'Always Use HTTPS' in Cloudflare SSL/TLS → Edge Certificates

No HSTS header **High**

Strict-Transport-Security header absent on HTTPS response. Combined with no HTTPS redirect, leaves site exposed to protocol downgrade.

Recommendation: Enable HSTS in Cloudflare with max-age=86400 initially, add includeSubDomains

Zero security response headers **High**

No CSP, X-Content-Type-Options, X-Frame-Options, Referrer-Policy, or Permissions-Policy headers.

Recommendation: Add via Cloudflare Transform Rule / Response Header modification

Canonical/sitemap trailing-slash mismatch **Medium**

Canonical tag: <https://rahul.techiking.com> (no slash) vs sitemap: <https://rahul.techiking.com/> (with slash). Both URLs return 200 with no redirect.

Recommendation: Standardize on one form and redirect the other via Cloudflare edge rule

Missing favicon **Medium**

/favicon.ico returns 404. No <link rel='icon'> in HTML. Affects browser tabs, bookmarks, SERP display.

Recommendation: Add favicon.ico + apple-touch-icon to public/ directory

No IndexNow integration **Low**

No IndexNow key file or deploy-time ping configured.

Recommendation: Add key file to public/ and ping on each deploy for faster Bing/Yandex reindexing

2.2 Content Quality

Score: 70/100

What Works

- Strong E-E-A-T: real experience (4.5+ years), specific metrics, verifiable certifications
- 5 detailed project case studies with problem/solution/impact
- Interactive SRE Incident Simulator — genuinely differentiating
- ~3,500-4,000 words of substantive technical content
- Good heading hierarchy (1 H1, 8 H2s, logical H3 nesting)

Findings

Site not indexed in Google **Critical**

site:rahul.techiking.com returns zero results. The domain has no discoverable presence in any search engine.

Recommendation: Submit sitemap to Google Search Console and Bing Webmaster Tools immediately

Content too fragmented for AI citation **Medium**

All content is in short bullet-point fragments, not self-contained 134-167 word paragraphs optimal for AI extraction and citation.

Recommendation: Rewrite key sections as citable paragraphs with direct-answer openers

No FAQ section **Medium**

No question-phrased headings or FAQ content for featured snippet and AI answer eligibility.

Recommendation: Add 3-5 FAQ questions that recruiters and AI systems would ask about this candidate

Resume dated March 2025 — appears stale **Medium**

resumeLastUpdated field shows 'March 2025' (1.5 years ago). May raise freshness concerns.

Recommendation: Update to current date in src/data/portfolioData.ts

Keyword stuffing risk from ATS Keywords section **Medium**

ATS Keyword Index section displays 30 keyword badges that may trigger keyword-stuffing detection.

Recommendation: Integrate keywords naturally into content rather than displaying as a flat badge list

2.3 On-Page SEO

Score: **60/100**

What Works

- Title tag: 57 chars, includes name + primary role keywords
- Meta description: 153 chars, includes key roles and cloud platforms
- Author/creator meta tags present
- Keywords meta tag present (12 keywords)

Findings

Missing og:image and twitter:image **High**

twitter:card is set to summary_large_image but no image exists. Every social share renders with no preview image.

Recommendation: Create 1200×630px OG image and wire into metadata.openGraph.images and metadata.twitter.images in layout.tsx

Single-page architecture limits internal linking **High**

Zero internal page links — all navigation uses anchor jumps on one URL. No PageRank distribution possible.

Recommendation: Create individual routes for project case studies (/projects/[slug]) to build internal link structure

H1 contains only name, no role keyword **Low**

H1 is 'Rahul Motvani' without any role keywords. Role keywords appear in surrounding text but not the H1 itself.

Recommendation: Consider 'Rahul Motvani — DevOps & Cloud Infrastructure Engineer' for H1

2.4 Schema / Structured Data

Score: **0/100**

Findings

Zero structured data on entire site **Critical**

Confirmed zero JSON-LD, Microdata, or RDFa via both live fetch and source code inspection. No entity markup for Person, ProfilePage, or WebSite.

Recommendation: Add ProfilePage/Person JSON-LD (with name, jobTitle, sameAs, knowsAbout, hasCredential) and WebSite JSON-LD to layout.tsx

Certification credentials have no verification URLs **Medium**

portfolioData.ts has a credentialUrl field on all 4 certifications but none are populated. Prevents schema from including verification links.

Recommendation: Add Credly/Coursera/Cisco verification URLs to each certification entry

2.5 Performance (CWV)

Score: **65/100**

What Works

- Zero third-party JavaScript
- Brotli compression active
- Font preloading for 2 primary woff2 fonts
- next/font optimization with next-size-adjust meta
- All JS chunks loaded async
- CDN caching via Cloudflare + Fastly

Findings

Oversized JavaScript bundle **High**

822KB total JS across 7 chunks for a static portfolio. Even with Brotli (~270KB transferred), this is excessive.

Recommendation: Lazy-load below-fold interactive sections (Architecture Explorer, SRE Sandbox) using next/dynamic. Target <400KB.

Large HTML document **Medium**

174KB HTML with all project data inline. Increases TTFB and time-to-interactive.

Recommendation: Consider lighter initial shell with dynamic imports for project detail data

Excessive font files **Medium**

14 woff2 files totaling 321KB. Most are likely unnecessary character subsets for an English-only site.

Recommendation: Audit next/font configuration — limit to Latin subset only for Inter and Fira Code

Borderline TTFB **Medium**

~730ms TTFB due to double-CDN (Cloudflare → Fastly/GitHub Pages).

Recommendation: Consider Cloudflare 'Cache Everything' page rule or migrating to Cloudflare Pages

2.6 AI Search Readiness

Score: 44/100

What Works

- Static export — content in initial HTML, no JS execution required for crawlers
- Strong factual content with quantified claims
- PerplexityBot and OAI-SearchBot allowed
- Real LinkedIn and GitHub presence for entity grounding

Findings

AI crawlers blocked by Cloudflare edge injection **Critical**

Cloudflare's AI Crawl Control injects Disallow rules for GPTBot, ClaudeBot, Google-Extended, and 5 more bots. This is NOT in the repo's robots.txt — it's a dashboard setting.

Recommendation: Cloudflare → Security → Bots → AI Scrapers → Unblock GPTBot, ClaudeBot, Google-Extended

No llms.txt file Medium

/llms.txt returns 404. No machine-readable summary for AI models exists.

Recommendation: Create public/llms.txt with structured identity/skills/projects/certifications summary

Zero YouTube/Reddit/Wikipedia brand signals Medium

YouTube presence (~0.737 correlation with AI citations) is completely absent. No Reddit or Wikipedia entity.

Recommendation: Publish a project walkthrough video on YouTube and link from portfolio

Single-URL architecture limits citation precision Medium

All content on one URL — AI citations always point to generic homepage regardless of which fact is cited.

Recommendation: Split project case studies into individual routes for per-topic citation precision

2.7 Images

Score: 15/100

What Works

- No oversized images (because there are no images)
- SVG icons via Lucide React — lightweight, scalable

Findings

Zero raster images on entire site Medium

No profile photo, no project screenshots, no architecture diagrams as images. Only 2 external Wikipedia SVGs and a decorative grid.svg.

Recommendation: Add professional headshot, project screenshots, and architecture diagrams as static images

No OG image for social sharing High

og:image and twitter:image both absent. Social shares render with no visual preview.

Recommendation: Create and add 1200×630px branded OG image to public/

No favicon High

favicon.ico returns 404. No link rel=icon in HTML. Missing from browser tabs, bookmarks, SERP display.

Recommendation: Add favicon.ico (32×32) + apple-touch-icon (180×180) to public/

3. Action Plan

Phase 1: Critical Fixes Week 1

- Submit sitemap to Google Search Console
- Enable HTTPS enforcement in Cloudflare
- Enable HSTS in Cloudflare
- Unblock GPTBot, ClaudeBot, Google-Extended in Cloudflare AI Crawl Control
- Add security response headers via Cloudflare Transform Rules
- Fix canonical/sitemap trailing-slash mismatch

Phase 2: High-Impact Improvements Weeks 2-3

- Add ProfilePage/Person + WebSite JSON-LD structured data
- Create and add OG image (1200×630px)
- Add favicon and apple-touch-icon
- Create public/llms.txt
- Populate certification verification URLs
- Update resume date to current

Phase 3: Content & Authority Month 2

- Build initial backlink profile (GitHub README, LinkedIn Featured, directories)
- Rewrite key content as 134-167 word citable paragraphs
- Add FAQ section with question-phrased headings
- Create individual project pages (/projects/[slug])
- Reduce JavaScript bundle from 822KB to <400KB
- Create YouTube project walkthrough video

Phase 4: Monitoring & Iteration Ongoing

- Monitor Google Search Console indexing and search performance
- Configure Moz API for backlink tracking
- Run Lighthouse/CrUX monitoring for CWV
- Capture SEO drift baseline

- Submit to Bing Webmaster Tools
- Add IndexNow integration

Data Sources & Methodology

Source	Description	Update Frequency
PageSpeed Insights API	Lighthouse lab audit (mobile emulation, Moto G Power, slow 4G)	Real-time
Chrome UX Report (CrUX)	28-day rolling field data from real Chrome users	Daily ~04:00 UTC
CrUX History API	25-week p75 trend data per metric	Weekly
Google Search Console	Search Analytics (clicks, impressions, CTR, position)	2-3 day lag
URL Inspection API	Per-URL index status, coverage state, crawl info	Real-time (2,000/day)

Report generated by Claude SEO — Google SEO Intelligence Skill — September 03, 2026
Methodology based on Google Web Vitals thresholds, Search Console documentation, and Lighthouse scoring algorithms.
