Rahul Motvani

DevOps Engineer | AWS · Kubernetes · Terraform · CI/CD | DevSecOps & Cloud Security | Building secure, automated cloud infrastructure

Ahmedabad, Gujarat, India

Summary

DevOps engineer who builds and secures cloud infrastructure and delivery pipelines — and who got here the durable way: from networking and systems, through security, into automation and cloud. I turn manual, fragile operations into automated, repeatable, secure workflows: infrastructure as code, container orchestration, CI/CD, and security and observability wired into delivery rather than bolted on at the end. What I work with: AWS (primary), with Azure and GCP; Terraform for infrastructure as code; Kubernetes, Docker and Helm for containerized workloads; CI/CD with Jenkins, GitHub Actions, GitLab CI and Bitbucket; Prometheus, Grafana and the ELK stack for observability; Linux; and Python/Bash for automation. Where I'm different — security in the pipeline. I come from a security background (ICSI-UK Certified Network Security Specialist, Top 3% on TryHackMe), so DevSecOps isn't a buzzword for me. I build secure CI/CD with SAST/SCA and dependency scanning (SonarQube, Snyk), vulnerability management (Nessus, Burp Suite, Wazuh), IAM, secrets management and cloud security posture — shifting security left so it keeps pace with delivery. Recent work I'm proud of: a zero-downtime Bitbucket infrastructure migration with a PostgreSQL upgrade; a SonarQube-based DevSecOps pipeline integrating shift-left SAST/SCA; and a modular Terraform framework for multi-cloud provisioning. Where I'm heading — intelligent operations. Alongside client work I build AI-assisted automation systems: event-driven agents, LLM tool orchestration over the Model Context Protocol, and safety-gated (permissioned) automated actions — exploring how AI reduces operational toil, as a practical path toward AIOps. I'm strongest where infrastructure, automation, security and reliability meet, and I'm growing toward platform and reliability engineering. Open to remote DevOps / DevSecOps / Platform / Cloud Infrastructure roles with startups, scale-ups and cloud-native teams internationally. I work well

async across time zones. rahulmotvani8@gmail.com · GitHub: github.com/rahulmotvani0-sketch · Portfolio: rahul.techiking.com

Experience

Agile logic Technovations
DevOps Engineer
December 2025 - Present (10 months)
Ahmedabad

Designed and deployed multi-cloud infrastructure across AWS, Azure and GCP with Terraform, enabling reproducible, version-controlled environments and reducing configuration drift.

Built and maintained CI/CD pipelines (Jenkins / GitHub Actions / GitLab CI with Git & Bitbucket) integrating automated SAST, SCA and dependency scanning — shifting security left and catching vulnerabilities before release.

Containerized applications with Docker and orchestrated workloads on Kubernetes (with Helm), improving deployment consistency and resource utilization across environments.

Hardened cloud environments with IAM policies, network segmentation, secrets management and vulnerability assessments, embedding security into infrastructure (DevSecOps).

Implemented monitoring, logging and alerting with Prometheus, Grafana and ELK to improve service visibility and shorten incident response.

Supported MLOps workflows — containerizing and deploying ML models to Kubernetes and integrating model serving into CI/CD. (Keep to one line so you read as DevOps, not ML engineer.)

Azilen Technologies
Information Technology Engineer
August 2024 - November 2025 (1 year 4 months)
India

Administered hybrid cloud and on-prem infrastructure (Windows/Linux servers, virtualization) for development teams — the operational foundation for later DevOps automation.

Automated repetitive system tasks with shell scripting, improving provisioning consistency and cutting manual effort.

Partnered with engineering to troubleshoot networking, access and deployment issues, minimizing downtime.

Aruhat Technologies Pvt. Ltd.
IT
June 2023 - July 2024 (1 year 2 months)
Ahmedabad

Implemented network segmentation and access controls across client infrastructure, strengthening security posture. (See §13 — rephrase the "30%" metric to something checkable.)

Led a migration to a new network architecture, improving scalability and reliability for business-critical workloads.

Administered virtualization environments and Windows/Linux servers; performed vulnerability assessments and remediation.

ABP Network
IT
July 2022 - May 2023 (11 months)
Ahmedabad, Gujarat, India

As an IT Support Specialist, I provide comprehensive technical assistance to ensure the seamless operation of computer systems, networks, and software within the organization. My responsibilities include troubleshooting issues, maintaining hardware and software, and supporting end-users with their technical needs. I prioritize timely and effective problem resolution, system reliability, and user satisfaction to enhance overall productivity and business continuity.

Education

Ganpat University department of computer science
IT (IMS), sever admin · (2017 - 2021)
